

3. (NEW) The device of claim 1, wherein said second member has a hole in its center to receive said shaft therein.
4. (NEW) The device of claim 1, wherein said second member is molded to said shaft.
5. (NEW) The device of claim 1, wherein said first member is substantially disc shaped.
6. (NEW) The device of claim 1, wherein said first member is shaped to receive a user's hand.
7. (NEW) The device of claim 1, wherein said second member is substantially disc shaped.
8. (NEW) The device of claim 1, wherein said first member is positioned on said shaft anterior of said second member.
9. (NEW) A device for turning a screw, comprising:
a shaft;
a handle disposed on said shaft;
a first member freely rotatable about said shaft; and
a second member disposed adjacent to said first member, which can engage said shaft.
10. (NEW) The device of claim 9, wherein said first member is continuously freely rotatable.
11. (NEW) The device of claim 9, wherein said second member continuously engages said shaft.
12. (NEW) A method for driving a shaft, comprising:
gripping a first member and a second member with a user's first hand;
